Selling CHP worldwide

Who we are

Kraftwerk has been developing and producing gas-powered combined heat and power (CHP) units since 1996 at its headquarters in Hanover, Germany. Its Mephisto CHP units cover an electrical output range from 8 to 50 kW. All units can run on natural gas, liquefied petroleum gas, biogas and sewage gas, and are designed and certified for operation with up to 20% hydrogen.

In 2024, the higher-level control system 'Direktor' was launched on the market. This enables holistic control of energy centres. It features a wide range of control and monitoring functions as well as economically optimised operation of combined heat and power plants, heat pumps and other generators, and also maps the consumer side.

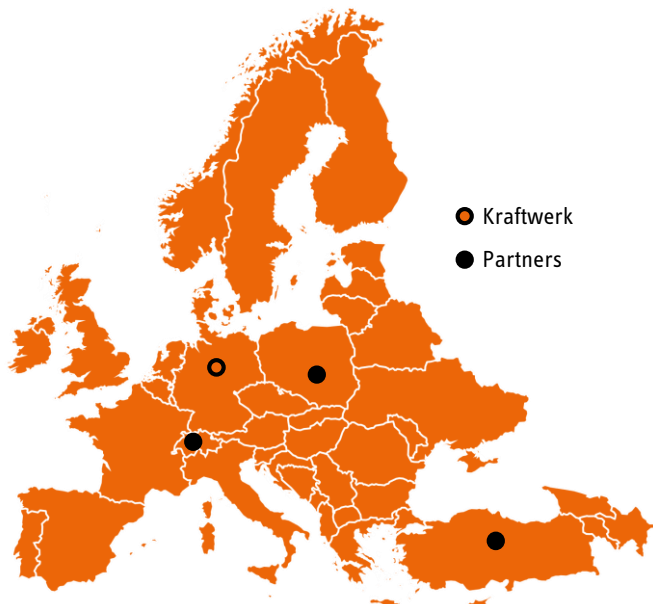

Your benefits as a partner

- Market-proofed product with German engineering at its core
- Reliable technology, suitable for professional customers and various kinds of projects
- Regular maintenance work offers a long-term business model in addition to sales and gives you the opportunity to strengthen customer loyalty
- Personal contacts with a high understanding of your business and the specific features of the energy sector

How we support

- We support you to get started with selling CHP units. This includes personal help within the first projects – even on site if necessary.
- We train you and your team in terms of technical design, economic analysis and provide specific calculation tools to help you with.
- We train your technicians so that they can perform installation and maintenance work on-site.

What you need

- Technical skilled people with an understanding of the local energy market
- Local workers who can get trained to install and maintain the CHP units on site.
- Local workers or companies who can do the necessary piping work and electric integration.

We are looking for sustainable partnerships, which means to work on equal terms right from the beginning. If you want to join our growing network of global partners, please don't hesitate to contact us.
